

Play is the key way children learn about themselves, others and the world they live in. It is essential to their learning, development, health, and physical, mental and social well-being – and it's FUN! Play provides the building blocks to be ready for school.

Sorting Games

Sorting objects or pictures into sets and subsets builds thinking and reasoning skills and early maths concepts.

Did you know?

As children get used to sorting things into groups they can start to explain how things are the same and different. It is easier for children to explain how things are different than it is to explain similarities.

Add language

Talk about similarities and differences between things in more detail, using more specific language e.g. use more complex category labels and groups within a broader category.

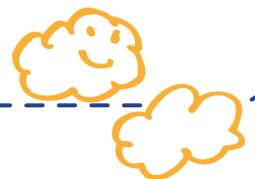

Talk about and ask occasional questions about what they are made of, what they are used for, or where they are found as ways of getting them thinking e.g. "What is the same about a horse and a chair?", "What else is made of metal?".

Other development

Using objects or pictures to sort into sets, sub-sets or unusual groupings helps build thinking, reasoning and memory skills e.g. grouping animals into pets, farm animals, or wild animals; into those with feathers,

fur, or fins; into insects, reptiles, or mammals; or into ocean animals, jungle animals, or desert animals.

Counting objects within groups helps your child learn early number concepts.

- Playgroup WA has a treasure trove of play activities for babies, toddlers and 3-5 year olds, for home and playgroup. These play activities cover a balanced diet of play across sensory, movement, language and thinking skill areas.

You can find them at www.playgroupwa.com.au/playideas or visit www.facebook.com/playgroupwa
